

EX PARTE

In the Matter of CC Docket No.94-102

Comments of LOCUS Corporation in Japan ("LOCUS") on Performance, Viability, and Application of the Mobile-Assisted Network Location System of AT&T Wireless.

LOCUS hereby submits ex parte comments on the Mobile-Assisted Network Location System ("MNLS"), as related to AT&T Wireless, Inc.'s ("AT&T") request for waiver.

LOCUS has recently succeeded in developing a new positioning technology with high accuracy for cellular phones. This system is a fusion of a new Advanced Maximum-Likelihood Estimation ("AME"), AOA, ESS, and BS-ID methods.

LOCUS is confident of supporting and improving AT&T's MNLS so as to comply with E-911 regulation.
